M2M Industry Working Group

- Launched m2m.eclipse.org portal
- Finished a series of 4 webinars
  - Average registration rate of 100/webinar, approx. 50 attendee/webinars
- Participate in the LeWeb conference in Paris – theme is Internet of Things
  - Sierra Wireless and Eurotech co-sponsoring the Eclipse M2M booth
- Focus is on recruitment of new members
  - Axeda becoming more active in the group

Auto-IWG Update

Steering Committee Members

Participant Members

Current

- Ongoing technical work
- Amalthea project integration behind schedule
- regular core- and consumer calls
- WP5 creates good feedback in industry

Upcoming

- Next meeting before ECE (Oct. 22)
- EATOP project proposal (Q4)
- Funding planning

Polarsys Update

Steering Committee Members

AIRBUS AN EADS COMPANY

ERICSSON

THALES

Participant Members

Obeo

intecs the Brainware company

Soyatec Open Solution Company

Current

- Top Level Project Charter published
- Obeo elected of Participating member to Steering committee

Upcoming

- Technical planning meeting Paris Oct. 18
- Next meeting before ECE (Oct. 22)
- gPM project contribution

Polarsys Financials

- Ericsson - steering committee level ($30‘000)
- Thales - steering committee level ($30‘000)
- Airbus - steering committee level ($30‘000)
- Obeo - participating member ($ 5‘000)
- Intecs - participating member ($ 5‘000)
- Atos - participating member ($ 10‘000)
- Soyatec - participating member ($1‘500)
- Sum 2012 to date: $111‘500
- Expected in Q4: Astrium ($30‘000)
- Expected in Q4: CEA List ($30‘000)

•LTS Status report

•Steering Committee Members

•Premium Members

•**Successes**
- LTS forge being trialed
- IWG created officially
- Steering Committee formed
- Polarsys members invited to join
- People thinking about LTS & readiness

•**Next steps**
- Need more suppliers to attract consumers
- Need more consumers to attract suppliers
- Continue work on forge & CBI

•**Challenges**
- Spent: $170K+, Revenue: $95K.
- Reasons given for not joining LTS IWG include
  - –Use the latest & never had an issue
  - –Juno is a small fraction of their needs
  - –They have committers on the projects already
  - –Policies require them to build from source on their hardware
  - –Just want to pay $X for the bug they care about to be fixed

CBI Status report

Sopot Çela
@smcela

Following

Just built #Eclipse SDK using maven clean install. This opens up a wide range of possibilities. Kudos to #platform #cbi

WEDNESDAY, AUGUST 22, 2012

Eclipse Platform CBI build just hit Fedora!

I think that by now almost everyone had heard of Tycho - a maven-like approach for building OSGi bundles, and the CBI initiative, which is about making Eclipse builds as easy as possible.

I'm proud to announce that the early adopter of everything, Fedora Rawhide, has just received an Eclipse built with Tycho.

- **Successes**
  - Eclipse platform cutting over (<11 bugs to go – ETA Nov. 2012)
  - MacOS & Windows signing service done
  - 7 interns from UCOSP working on Maven/Nexus unification
  - Much positive feedback from community
  - CDT, Egit, Jgit, Mylyn, m2e, Tycho, etc. using CBI

Noteworthy

- CBI emerging as a significant differentiator vs. Github and other forges.

- **Challenges**
  - Likely to lose Igor (Sonatype) soon if not already
  - Platform team limited time to push Eclipse platform build to completion
  - Work towards solving nasty software distribution issues involving p2 & Maven

- **Next steps**
  - Complete cut over of Eclipse platform
  - Give Thanh Ha time to develop into a Tycho guru
  - Influence others to switch to CBI
  - Continue CBI evolution
  - Architect & Design p2/Maven solution

•Steering Committee Members

Good level of interest & continued growth.

•Successes

- IWG created officially
- Forge coming on-line, web site on-line
- Steering Committee meeting regularly
- IWG meeting regularly
- Project proposals: 1 done, 1 in progress, a few more likely in 2012, and more coming.

•Next steps

- Forge on-line, operating
- Build momentum! Sign members, project proposals, promote the group

•Challenges

- A pair of notable “founders” had to back out due to poor financial results & restructuring
- Often repeating ourselves explaining what the difference is between Github (infrastructure) and Eclipse LocationTech (infrastructure + community + foundation)
- Some minor animosity from particularly zealous OSGeo community who feel LocationTech is a threat
